Amp Energy, Ohmium tie up for green hydrogen

New Delhi: Amp Energy India on Friday said that it has collaborated with electrolyser manufacturer Ohmium to deploy 400 MW of green hydrogen projects.

Deployments, aimed at mid-sized Commercial and Industrial (C&I) projects of 25 MW or smaller, are planned to be installed over the next three years. Amp Energy will use Ohmium's interlocking modular Proton Exchange Membrane electrolysers, Amp Energy said in a statement.

Amp Energy India is a renewable energy IPP with a total portfolio of 2GW spread across 15 States. OUR BUREAU
